

New Vision

SearchNG

The Next Generation of Search

NewVision Systems Corporation is proud to announce the most revolutionary advancement in records access in the last decade. Combining Microsoft's latest .Net platform and NewVision's extensive experience and leadership in records management, the next generation of records access is now available. SearchNG is rich in functionality and is designed to reduce the need for IT support.

Game Changing Search Engine

Advanced Functionality

SearchNG provides advanced functionality that allows searchers to perform their tasks quickly, efficiently and accurately. Highlights include:

- **One Product for In-House and Internet Searches** - Eliminating differences in features.
- **Multiple Name Searches** - The user can enter an unlimited number of names, enabling searches on, e.g., alternative name spellings or married and maiden names at once. The hit list displays all records with any of the names entered.
- **Second Party Search** - Combined with the First Party name search, the system returns only records with all names entered--useful when searching for records with popular builders or banks.
- **Document Search Groups** - Ability to search on any group of document types, such as Warranty Deed, Quit Claim Deed, Mortgage, etc. Search groups are unlimited and easily defined.
- **Build-A-Search Functionality** - Allows staff to quickly and easily add a search on any database table or column and integrate the search into the standard user interface.

Users Can...

- Input and view all search criteria on one screen.
- Personalize their interfaces - registered users can customize their "hit list" displays.
- Choose between basic and advanced search options.
- Quickly sort and filter hit list results, since all results are displayed on one screen.
- Scroll through document detail and images for the entire hit list.
- View multiple search results and images at once.
- Copy results into Excel.
- If authorized, print and save images and documents with or without watermarks.
- Save documents as TIFFs or PDFs directly from the image view window.
- Utilize multiple monitors.

Deployment and Maintenance

- SearchNG can be deployed both as a client server product (for local users) and via an application server (for remote users). Deployment and version management occur through the administration function - Upgrades no longer require that software be manually installed.

Please view our product "live" at the Osceola County, Florida Clerk's web site:
